

**Your garden centre will need  
a forklift, loading shovel and  
RTFL some of the time.  
Doesn't it make sense to get  
one machine to do the lot,  
all of the time ?**

**JCB doesn't make  
ordinary forklifts.  
Ours are unique,  
so that you can  
make big  
financial savings.**

Garden Centres can make financial savings by switching to the JCB Teletruk because payback can equate to the purchase price of one or more machines.

Some customers have replaced two machines with one Teletruk and redeployed operators to other duties. That's a big saving straight to the bottom line.

Others have saved by going for our in-cab operator-controlled quick-disconnect device; Change from forks to attachment safely in under 20 seconds. Changing between forks and a shovel or indeed any other attachment could eliminate the cost of having two dedicated machines at your Centre.

If you offer bagged sand, aggregates and bark chippings, the unique JCB Bagezee 'trapdoor' shovel will save money. Buy materials in bulk at lowest cost, and then fill bags on site as required. One operator on one Teletruk can fill a bag ready for a customer in about a minute.

There's no mast, giving better visibility with the added advantage of reduction in the cost of maintenance. The JCB Teletruk comes with hydrostatic transmission and sealed brakes as standard, and for those tougher ground conditions there's the option of 4x4.

Some savings are impossible to quantify, such as improved safety factors. Being able to extend the boom not only allows the operator to reach to the far side of a wagon bed (single-side load) but it also allows the operator to stay clear of hazards.

4x4 Teletruk reaching forwards, loading the lorry from one side only

The forks carriage rotates through 111 degrees giving great flexibility

**Fill a bag with sand, aggregate or bark chippings in about a minute with the unique JCB Bagezee 'trapdoor' shovel**
